FOREWORD

In line with our commitment to provide relevant and more disaggregated statistics at the local level, the **Philippine Statistics Authority (PSA)** through its Sultan Kudarat Provincial Office, has come up with the publication, ***The Countryside in Figures: Sultan Kudarat Province, 2018 Edition***.

This publication has been patterned after the national version of the publication “The Countryside in Figures.” The publication, which contains relevant statistics and indicators about the performance of the province, serves as a useful tool for planners, investors, and researchers in the province of Sultan Kudarat.

This 2018 edition is an updated version of the 2017 Countryside in Figures that provides provincial data on the following: General Information, Income and Expenditures, Agriculture, Health, Nutrition and Vital Statistics, Education, Fiscal Administration and Public Order & Safety. Whenever available, municipal level data are also presented. Further, this publication contains indicators showing the performance of Sultan Kudarat with those of the other three provinces of SOCCSKSARGEN Region, as well as the rankings of its 11 municipalities and one component city based on their socio-economic performance. Sectoral highlights are also included to guide data users in their analysis.

We hope that this publication will serve the need for more comprehensive statistics useful in planning, decision making and policy setting towards more effective local governance and inclusive growth. Further, we hope that ***The Countryside in Figures: Sultan Kudarat Province, 2018 Edition*** will further increase the awareness and appreciation of local government units and the public in general, on the importance of statistics.

GENERAL INFORMATION

Household – a social unit consisting of a person living alone or a group of persons who sleep in the same housing unit and have a common arrangement in the preparation and consumption of food.

Household Population – the population enumerated in private households during a census.

Household Size – number of usual members in a private household.

Human Development Index – a measure of how well a country has performed, not only in terms of real income growth, but also in terms of social indicators of people's ability to lead a long and healthy life, to acquire knowledge and skills, and to have access to the resources needed to afford a decent standard of living.

Medium Assumption – moderate fertility decline and mortality decline.

Population – total number of individuals in a territory at a specified time. It covers both nationals and aliens, native and foreign-born persons, internees, refugees and any other group physically present within the borders of a country at a specified time. In assembling national demographic statistics for publication, the basic aim has been to obtain data for the physically present (or de facto) population rather than for the legally established resident (or de jure) inhabitants.

Population Census – the total process of collecting, compiling, evaluating, analyzing and publishing demographic, economic and social data pertaining to all persons in the country or in a well-limited territory.

Population Density – refers to the number of persons per unit of land area (usually in square kilometers). This measure is more meaningful if given as population per unit of arable land.

Population Growth Rate – indicates how fast a population increases or decreases as a result of the interplay of births, deaths, and migration during a given period of time. Where the population is closed, meaning no migration, the population growth rate is the same as the rate of natural increase, i.e., the difference between the number of births and the number of deaths during a specified period of time. The three methods for computing the rate of growth based on the assumption with respect to the change are: arithmetic change, geometric change and exponential change.

Population Projection – computation of future changes in population numbers, given certain assumptions about future trends in the rates of fertility, mortality and migration. Demographers often publish high, medium, and low projections of the same population based on different assumptions of how these rates will change in the future.

INCOME AND POVERTY SITUATION

Consumer Price Index (CPI) – measure of the average changes in the prices of a fixed basket of goods and services usually purchased by households for their consumption.

Family expenditures – refer to the expenses or disbursements made by the family purely for personal consumption during the calendar year. They exclude all expenses in relation to farm or business operation, investment ventures, purchase of real property and other disbursements which do not involve personal consumption.

Family size – number of members present in the family.

Magnitude of the Poor – the number of families or the population whose annual per capita income falls below the subsistence/poverty threshold.

Per Capita Income – is obtained by dividing the total family income by the number family members.

Poverty Incidence – proportion of families/population whose annual per capita income falls below the annual per capita poverty threshold to the total number of families/population.

Poverty Threshold – annual per capita income required or the amount to be spent to satisfy nutritional requirements (2,000 Kcal) and other basic needs.

Poverty Gap – the total income/expenditure shortfall (expressed in proportion to the poverty threshold) of families/individuals with income/expenditure below the poverty threshold, divided by the total number of families/individuals.

Subsistence Incidence – proportion of families/population whose annual per capita income falls below the annual per capita food/subsistence threshold to the total number of families/population.

Subsistence and Food Threshold – annual per capita income required or the amount to be spent to satisfy nutritional requirements (2,000 Kcal).

Total Family Income – includes primary income and receipts from other sources received by all family members during the calendar year as participants in any economic activity or as recipients of transfers, pensions, grants, etc.

Aquaculture – sector of fisheries that includes the rearing or raising under controlled conditions of aquatic products such as fish, oysters, mussels, sea weeds and other aquatic resources in sea, lakes and rivers. Examples are fishponds, fish pens and fish cages.

Commercial Fishing – sector of fisheries that includes the catching of fish in marine waters with the use of fishing boat of more than three (3) gross tons and beyond the seven (7) kilometers shoreline limit.

Municipal Fishing – sector of fisheries that includes the catching of fish in marine and inland waters with the use of fishing boat of three (3) gross tons or less, or using gear not requiring the use of boats.

HEALTH

Infant Mortality Rate – the annual number of deaths of infants under one year of age per 1,000 live births.

Maternal Death – the death of woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and the site of the pregnancy or its management, but not from accidental or incidental causes.

Maternal Mortality Rate – the annual number of deaths of women from pregnancy-related causes per 100,000 live births.

Morbidity – any departure, subjective or objective, from a stage of physiological well-being.

Mortality Rate – generally expresses the chance that death will occur during a particular period to a person in particular population group alive at the beginning of the period. As such, those rates are true probabilities and describe precisely the risk of dying for any actual cohort.
