About the Cover

The cover of The Countryside in Figures (CIF) Sultan Kudarat Province 2022 Edition has been enhanced to showcase and promote the tourist attractions of Sultan Kudarat Province. Apart from being the coffee capital of the Philippines - Senator Ninoy Aquino is home to a number of pristine, “world-class” caves.

In this 2022 edition, it features the Lagbasan Cave of Barangay Kuden in the Municipality of Senator Ninoy Aquino (formerly Kulaman), Sultan Kudarat.

Lagbasan cave is composed of large passages 7 to 50 m wide and up to 40 m tall indicating development by a large stream over an extended period of time.

The Cave is globally significant for the extremely prolific stalagmites, large stalactites, cave curtains and columns and large and very well developed splattermites.

FOREWORD

The Countryside in Figures - Sultan Kudarat Province 2022 Edition (CIF 2022) is a ready reference for development planners and decision-makers for statistics crucial for planning and decision-making at the local level.

The 2022 edition contains updated data on the seven major areas, namely: General Information, Income and Expenditures, Agriculture, Health, Nutrition and Vital Statistics, Education, Fiscal Administration, and Public Order and Safety. One major feature of the 2022 edition is the updating of population counts down to the barangay level based on the results of the 2020 Census of Population and Housing (2020 CPH) declared official for all purposes by the President of the Philippines pursuant to Proclamation No. 1179 dated 06 July 2021. Further, available socio-demographic characteristics about the province based on the results of the 2020 CPH are also contained in this publication.

The publication of the ***CIF 2022*** is in line with the continued commitment of the Philippine Statistics Authority - Sultan Kudarat Provincial Office to provide local planners and decision-makers with accurate, timely, reliable and relevant statistics that would support crafting of more responsive programs and policies for the betterment of the lives of the people of Sultan Kudarat Province.

MESSAGE

In line with its commitment to provide relevant and more disaggregated statistics at the local level, the **Philippine Statistics Authority (PSA)** through its Sultan Kudarat Provincial Office, has come up with the publication, ***The Countryside in Figures: Sultan Kudarat Province, 2022 Edition***.

This publication has been patterned after the national version of the publication “The Countryside in Figures”. The publication, which contains relevant statistics and indicators about the performance of the province, serves as a useful tool for planners, investors, and researchers in the province of Sultan Kudarat.

This 2022 edition is an updated version of the 2021 Countryside in Figures that provides provincial data on the following: General Information, Income and Expenditures, Agriculture, Health, Nutrition and Vital Statistics, Education, Fiscal Administration and Public Order & Safety. This publication also contains latest population counts down to barangay level as well as available socio-demographic characteristics based on the results of the 2020 Census of Population and Housing (CPH). Further, this publication contains indicators showing the performance of Sultan Kudarat with those of the other three provinces of SOCCSKSARGEN Region, and the rankings of its 11 municipalities and lone component city based on their socio-economic performance. Sectoral highlights are also included to guide data users in their analysis.

We hope that this publication will serve the need for more comprehensive statistics useful in planning, decision making and policy setting towards more effective local governance and inclusive growth. Further, we hope that ***The Countryside in Figures: Sultan Kudarat Province, 2022 Edition*** will further increase the awareness and appreciation of local government units and the public in general, on the importance and value of statistics.

Congratulations to PSA – Sultan Kudarat for this noble effort!

Climate in the province is characterized by a short dry season of one to three months while the rainfall is evenly distributed throughout the year. The province is considered free from typhoons.

The province has some of the richest fishing grounds and vast brackish and fresh water areas in the region. The Celebes Sea at the western side of the province is the major source of fish including bangus and tuna fish. Others are Lake Buluan, existing marsh areas and numerous rivers and creeks.

The province is blessed with abundant water resources that could be utilized for drinking water, irrigation, hydropower and inland fish production and recreation purposes. There are 16 known big rivers including Ala River, Lulaman and Kabulnan rivers.

GENERAL INFORMATION

Household – a social unit consisting of a person living alone or a group of persons who sleep in the same housing unit and have a common arrangement in the preparation and consumption of food.

Household Population – the population enumerated in private households during a census.

Household Size – number of usual members in a private household.

Medium Assumption – moderate fertility decline and mortality decline.

Population – total number of individuals in a territory at a specified time. It covers both nationals and aliens, native and foreign-born persons, internees, refugees and any other group physically present within the borders of a country at a specified time. In assembling national demographic statistics for publication, the basic aim has been to obtain data for the physically present (or de facto) population rather than for the legally established resident (or de jure) inhabitants.

Population Census – the total process of collecting, compiling, evaluating, analyzing and publishing demographic, economic and social data pertaining to all persons in the country or in a well-limited territory.

Population Density – refers to the number of persons per unit of land area (usually in square kilometers). This measure is more meaningful if given as population per unit of arable land.

Population Growth Rate – indicates how fast a population increases or decreases as a result of the interplay of births, deaths, and migration during a given period of time. Where the population is closed, meaning no migration, the population growth rate is the same as the rate of natural increase, i.e., the difference between the number of births and the number of deaths during a specified period of time. The three methods for computing the rate of growth based on the assumption with respect to the change are: arithmetic change, geometric change and exponential change.

Population Projection – computation of future changes in population numbers, given certain assumptions about future trends in the rates of fertility, mortality and migration. Demographers often publish high, medium, and low projections of the same population based on different assumptions of how these rates will change in the future.
