Table 5, Table 6 and Figure 2. showed that the PPP for the province of Sultan Kudarat dropped to PhP 0.80 in September 2024 from PhP 1.00 in 2018.

This means that the peso in 2018 is only worth 80 centavos in September 2024, or an average Sultan Kudarateños household need PhP 125.10 to purchase the same volume of goods and services worth P100.00 in 2018.

TECHNICAL NOTES

Consumer Price Index (CPI):

- A measure of the change in the average retail prices of a fixed basket of goods and services commonly purchased by households relative to base year.
- It measures the composite change in the consumer prices of various commodities overtime.
- It stands for the percentage change in the average prices of goods and services commonly bought by a group of consumers from the base year.

Components of the CPI:

Market Basket

refers to sample of goods and services commonly purchased by a particular group of consumers in a particular area.

Weight

a value attached to a commodity or group of commodities to indicate the relative importance of that commodity or group of commodities in the market basket.

Base Period

a period usually a year, at which the index number is set to 100 or it is the reference point of the index number series.

Index Method

gives the formula used in computing the index number.

Sample Outlets

 establishment or retail outlets where prices of commodities/services are collected or quoted.

Indicators Derived from the CPI Inflation Rate (IR)

- rate of change in the average price level as measured by the CPI between two periods.
- it is equivalent to the decline in the internal purchasing of the peso.
- it is derived indicator by comparing the CPI between two periods, usually a year.
